# Animal Collars

An Elizabethan collar is a device designed to prevent animals from reaching wounds in post-operative processes and/or any devices attached to the animal's body during the study. They can also be used during routine dosing or any other procedure.

Our line of collars cover those species commonly used in scientific research, including those we manufacture jackets for, which include:

- Non-Human Primates: Rhesus, Cynomolgus
- Canines: Beagles
- Rodents: Rats, Mice
- Rabbits: NZ White Rabbits

Collars for other species can be developed upon request.

## Product Features

**Hook and loop adjuster:** Can be adjusted depending on animal size.

**Low density polyethylene:** Provides better malleability.

**Soft cotton fabric trim:** Provides increased comfort for the animal.

Ludomed's collars offer excellent protection without affecting the animal's feeding activity or mobility.

Ludomed collars and jackets for any species can be utilized simultaneously in study scenarios.
