

## Post-surgery Water Heating Therapy System with Chamber

This system is designed for the thermal care recovery of rats and mice post-surgery. It uses a constant temp. water circulation to heat a metal surface, combined with a ventilated transparent chamber, offering features such as rapid heating, consistent and uniform temperature, and smooth airflow, providing a comfortable recovery environment for post-operative animals.

The base of the chamber can be equipped with additional padding or surgical mats to absorb animal urine and feces. The chamber is both fixable and detachable, with a lockable lid, ensuring safe care and quick, efficient cleaning of the chamber.

It can accommodate more than 3 rats or over 20 mice.

### ■ Order Information

No.	Cat No.	Description
1	VI-1500-63	Water Heating Therapy System for Rat and Mouse, 310*290*150MM.
2	VI-1300-63	Water Recirculating Pump, 20-65°C adjustable.
3	VI--0102-63	Warming chamber for Mouse and Rat, 310*290*150MM
